

## Measurement guide: Drawer front

### Step 1 – External dimensions:

Measure the width and height of your drawer front from edge to edge on the inner/rear side of the front or panel, and enter the measurements (mm) into the appropriate boxes.

### Required tools:

Tape measure, pen, and the printed measurement guide.

 mm

**Height of the front**

 mm

**Width of the front**

### Step 2 – Drill holes (optional):

The distances of the drill holes for the front attachment are always measured from the bottom edge and the outer sides of your front to the centre of the hole. For this, you will need to remove the front from the drawer. In many drawers, this can be done by simply loosening the screws visible inside the drawer.

Tip: If you are unsure how to remove the drawer front, we recommend booking a measurement through our service partners or consulting our service team.

### Step 3 – Handle drilling (optional):

For drawer fronts, handles are always positioned centrally and aligned horizontally.

If you already have your own handle that you want to mount on your new front, please let us know the distance between the handle screws (in mm). These are always measured from the centre of one screw hole to the centre of the other.

Distance between handle screws: \_\_\_\_\_ mm

### Step 4 – Configuration:

After measuring, you can quickly and easily enter the data into the configurator at <https://www.Furnfab.com/en/renovating-fronts..>
